## DATA TABULATION VOLUMES

This material provides information for use by readers to interpret the tabulation volumes accompanying the final project report: 1989 Survey of U.S. Army Reserve (USAR) Troop Program Unit (TPU) Soldiers. The Tabulation Volumes list questionnaire items and the percent of respondents (weighted to population estimates) who have responded in particular ways to questionnaire items. Frequencies of variables calculated from **unweighted** data are found in the Codebook.

The U.S. Army Reserve population eligible for selection was defined by the number of personnel records on a December 1988 SIDPERS data base; this totalled 280,265 Reservists, 268,201 of whom were eligible for the cross-sectional sample. A total of 25,327 Reservists were selected for the cross-sectional sample. In addition, the 11,452 Reservists who were selected and responded to the survey in 1988 were surveyed in 1989 to assess changes in attitudes and perceptions, and examine their relationship to leaving or staying in the U.S. Army Reserve. The total for the 1989 combined cross-sectional and longitudinal samples was 36,779 Reservists. Of the 25,327 selected Reservists in the 1989 cross-sectional sample, 10,913 completed and returned their surveys, resulting in a 43% unadjusted response rate. A total of 6,754 of the 12,295 Reservists (of whom 843 were no longer on the SIDPERS database) in the longitudinal sample completed and returned their questionnaires, for a final unadjusted response rate of 59%. Responses were then weighted to account for disproportionate sampling and differential nonresponse across specific subgroups. Weighting procedures also involved weighting respondent data to the eligible U.S. Army Reserve population (as described in Chapter 2 of the 1989 Research Plan).

### Types of Tabulation Volumes

There are two sets of Tabulation Volumes. The first set of Tabulation Volumes presents results for the 1989 cross-sectional sample only. This sample consists of Reservists selected in the second year of the survey who returned completed survey questionnaires (N=10,913). There are four cross-sectional 1989 Tabulation Volumes that report results for: (1) all respondents; (2) officers only; (3) noncommissioned officers (NCOs) only; and (4) junior enlisted personnel only. The second set of Tabulation Volumes presents results for the 1989 longitudinal sample only. Comparing response frequencies in the 1988 cross-sectional Tabulation

Volumes (produced in 1988) with those in the 1989 cross-section Tabulation Volumes shows the amount of change in background characteristics, attitudes, and opinions of the U.S. Army Reserve population and subpopulations (e.g., junior enlisted, NCOs, etc.) from 1988 to 1989.

The second set of Tabulation Volumes present results for the 1988-1989 longitudinal sample. This sample consists of Reservists who were sampled and had completed survey questionnaires in the first year and who had also returned completed survey questionnaires in 1989 (N=6,754 of a total of 11,452<sup>1</sup> Reservists in the longitudinal sample). Three Tabulation Volumes were generated for the 1988-1989 longitudinal sample. The first volume reports 1989 questionnaire responses of junior enlisted who stayed in the Army Reserve from 1988 to 1989 (referred to as "stayers;" N=1,782 of a total of 3,568 junior enlisted Reservists in the longitudinal sample).

The second longitudinal Tabulation Volume reports the 1988 questionnaire responses of the junior enlisted "stayers" who were used as the sample to generate the first longitudinal Tabulation Volume. Comparing questionnaire response frequencies between the 1988 and 1989 longitudinal Tabulation Volumes for junior enlisted stayers show aggregate changes in attitudes and perceptions of junior enlisted stayers from 1988 to 1989.

The third 1988-1989 longitudinal Tabulation Volume reports the 1988 questionnaire responses of junior enlisted "leavers" from 1988 to 1989. Of the total sample of 3,568 junior enlisted in the longitudinal sample, 574 junior enlisted left the Army Reserve between 1988 and 1989. Comparing responses in this 1988 "leaver" Tabulation Volume to those in the 1988 "stayer" Tabulation Volume shows aggregate differences in attitudes and perceptions between junior enlisted leavers and stayers. These differences may be interpreted as factors influencing the decisions of junior enlisted to stay in or leave the Army Reserve.

<sup>1</sup>Of the original 12,295 soldiers in the 1988 longitudinal sample, 843 soldiers were no longer found on the 1989 SIDPERS data file.

## **Crossing Variables Chosen for Crosstabulations**

The primary function of the Tabulation Volumes is to provide data that have direct implications for specific research questions and for U.S. Army Reserve policy questions. Most of these questions pertain to subpopulation differences, such as:

- How does intention to stay in the Army Reserve differ by rank, gender, marital status, educational level, and prior service?
- To what extent can the observed differences in Reservists' intentions to remain in the Army Reserve be explained by differences in their reasons for joining, expectations for the Reserve, the type of Army Reserve duties they perform, their unit's administration and leadership, etc.?

The Tabulation Volumes serve primarily to answer these broad questions of interest, as they report the distribution of responses to questionnaire items overall and by subpopulations of policy interest. For the cross-sectional sample, there are four separate Tabulation Volumes; these are: (1) (officers and enlisted combined) questionnaire item responses by rank; (2) officers (O1 through O8), questionnaire item responses by selected demographic variables (see below); (3) noncommissioned officers (NCOs, E5 through E9), questionnaire item responses by selected demographic variables (see below); and (4) junior enlisted only (E1 through E4), questionnaire item responses by selected demographic variables (see below).

There are three separate Tabulation Volumes for the longitudinal sample; these are: (1) 1989 questionnaire responses of junior enlisted stayers from 1988 to 1989, crossed by selected demographic variables (as described below); (2) 1988 questionnaire responses of junior enlisted stayers from 1988 to 1989, crossed by selected demographic variables (as described below); and (3) 1988 questionnaire responses of junior enlisted leavers between 1988 and 1989, crossed by selected demographic variables (as described below). Detailed below are the specific crossing variables used for the cross-sectional and longitudinal Tabulation Volumes.

**Cross-Sectional Tabulation Volumes.** Demographic information collected from the survey instrument was used to group respondents into the four rank subpopulations for which cross-sectional Tabulation Volumes were generated. Indicated below are the questionnaire items that were used to define the categories for each of the crossing variables.

**Volume No. 1** (combined Officers and Enlisted) (Questionnaire item response by rank as determined by response to Questionnaire Item 73)

Junior Enlisted (E1-E4)  
Junior NCOs (E5-E6)  
Senior NCOs (E7-E9)

ROTC Cadets (CT5-CT8)

Junior Warrants (W01, CW2)  
Senior Warrants (CW3, CW4)

Company Grade Officers (01-03)  
Field Grade Officers (04-05)  
Colonels and General Officers (06-08)

**Volume No. 2** (Officers only, i.e., ROTC Cadets, Warrant Officers and Commissioned Officers as determined by Questionnaire Item 73) (Questionnaire item response by selected variables listed below)

Gender (As determined by responses to Questionnaire Item 92)

Male  
Female

Marital Status (As determined by responses to Questionnaire Item 97)

Not Married (Never married)  
Married (Married for first time, Remarried)  
Other (Legally separated, Divorced, Widowed)

Educational Level (As determined by response to Questionnaire Item 95)

No College Degree (Less than a Bachelor's degree)  
College Degree (Bachelor's degree or higher)

Prior Service (As determined by responses to Questionnaire Item 5)

Prior Service  
No Prior Service

AOC-Qualified (As determined by responses to Questionnaire Item 28)

Qualified for Duty Position  
Not Qualified for Duty Position

Career Intent (As determined by responses to Questionnaire Item 84)

Stay Past Current Obligation or Until Retirement  
Leave at End of Current Obligation  
Leave Before End of Current Obligation

**Volume No. 3 (Noncommissioned Officers only, i.e., Sergeants (E5) through Sergeant Majors (E9)) (Questionnaire item response by selected variables listed below)**

Leave at End of Current Obligation  
Leave Before End of Current Obligation

**Longitudinal Tabulation Volumes.** Each of the three longitudinal Tabulation Volumes consist of junior enlisted responses only. Demographic information collected from the survey instrument was used to group respondents into rank categories, and junior enlisted were then separated from the other rank groups for purposes of producing the longitudinal Tabulation Volumes.

The crossing variables used for each of the longitudinal Tabulation Volumes were identical. Indicated below are the questionnaire items that were used to define categories for each of the crossing variables.

**Longitudinal Tabulation Volumes** (Junior enlisted only, i.e., Privates through Corporals/Specialist Fours) (Questionnaire item response by selected variables listed below)

**Gender (As determined by responses to Questionnaire Item 92)**

Male  
Female

**Marital Status (As determined by responses to Questionnaire Item 97)**

Not Married  
Married

Leave at End of Current Obligation  
Leave Before End of Current Obligation

**Derivation of Crossing Variables.** Briefly described here are the procedures used to code responses to questionnaire items to form column variables in the Tabulation Volumes. Responses to Question 73 were used to create the rank groups. Both officer and enlisted subpopulations were included in the first Tabulation Volume for the cross-sectional sample. Officer ranks in the combined officer and enlisted cross-sectional Tabulation Volumes were divided into the following pay grades: WO1-CW2 (Junior warrant officers); CW3-CW4 (Senior warrant officers); O1-O3 (Company grade officers); O4-O5 (Field grade officers); and O6-O8 (Colonels and Generals). ROTC Cadets responded to the pay grades of CT5, CT6, CT7 and CT8 on Questionnaire item 73 and formed the ROTC cadet group. All the enlisted pay grades comprised the enlisted subpopulation. The enlisted subpopulation was then divided into junior enlisted and noncommissioned officers for purposes of reporting responses to questionnaire items. Noncommissioned officers (NCOs) were identified as being in the pay grades E5 through E9 and formed the NCO subpopulation for the third cross-sectional Tabulation Volume. (Responses for junior NCOs (pay grades E5-E6) and senior NCOs (E7-E9) are reported separately in the overall

(Volume 1) Tabulation Volume.) Junior enlisted were those in the pay grades E1-E4, and these respondents comprised the fourth cross-sectional Tabulation Volume.

Question 92 was used to determine whether respondents were female or male. Question 97 was used to determine marital status. A response of "Single, never married" was treated as Not Married. Response of "Married for the first time" and "Remarried" were collapsed into the Married category. Finally, "Legally separated or filing for divorce," "Widowed" and "Divorced" were placed into the Other category.

Educational level for both the officer and enlisted volumes was determined by responses to Question 95. For the officer volume, responses of bachelor's degree or higher were treated as one group, and respondents with fewer than 4 years of college and those with 4 years of college but no degree were placed in a No College Degree group.

For the enlisted Tabulation Volumes, there were four levels of education. The first response to Question 95 formed the Less Than High School group. The second response formed the High School Completed group. The next three responses, "Up to 2 years of college, but no degree," "Associate's degree" and "From 3 to 4 years of college, but no degree" formed the Less Than College Degree group. The final group consisted of respondents who answered "Bachelor's degree" and above.

The prior service column variable was determined by using responses to Question 5. Respondents who reported having had prior active duty service in any military component comprised the Prior Service category, and those who did not formed the Nonprior Service group.

Responses to Question 28 served to divide respondents into two groups: Those who were AOC/MOS-qualified and those who were not.

Question 84 was used to derive three levels of intent to stay in the U.S. Army Reserve. The first category, "Stay in the Army Reserve beyond my current obligation or until retirement," combined responses to the first two career intent categories. The second category included only those respondents who said they would leave upon completion of their current obligation. The third category included those respondents who said that they would leave prior to the end of their present obligation.

## Conventions Adopted for the Tabulations

The distribution of responses for each questionnaire item is presented on a separate page in each of the Tabulation Volumes. All questionnaire items that appeared on the survey instrument for analytic reasons and that could be sensibly generalized to the population in question were included in the Tabulation Volume data tables. The variables are in the same order as the questionnaire items in the survey instrument. (Only Question 71 is excluded due to the large number of MOS categories and the resultant small weighted percentages. The project Codebook presents actual, unweighted frequencies for this question.)

At the top of each tabulation page is a 40-character label that identifies the variable tabulated. The label includes (1) the survey question number corresponding to the questionnaire item number; and (2) an abbreviated, 40-character description of the question (e.g., Q5 "Ever Served Active Duty Any US Mili?"). For the most part, each row in the data table represents a single distinct response. However, continuous variables with a large number of categories were collapsed for the tabulations.

**Collapsing and Editing Variables.** Response categories for questionnaire items used as crossing variables were described earlier. Response categories to certain questionnaire items (listed down the left hand margin of the pages of the Tabulation Volumes and referred to as "stub variables") were collapsed to make results reported in the Tabulation Volumes more interpretable. Responses to Question 7 (year separated from active duty) were collapsed into seven time periods associated with significant events in the U.S. Army; these are: 1953 and earlier (Korean War Era); 1954-1965 (pre-Vietnam deployment); 1966-1973 (Vietnam War Era and the beginning of All-Volunteer Force); 1974-1980 (the All-Volunteer Force); 1981-1984 (beginning of the Total Army concept); 1985-1986; and 1987-1989. The latter two categories are used to represent more recent officer acquisitions. Question 32 (the number of unpaid hours spent on Army Reserve duties) is broken down into the following categories: 0 hours; 1-4 hours; 5-8 hours; 9-16 hours (one to two days); 17-40 hours (over 2 days through 5 days); and 41 hours and up (more than 5 days). Eight hours is considered one working day. How long the Reservist spent in the unit (Question 62) is recoded as: less than 6 months; 6 months to 1 year; 2 years; 3-5 years; 6-10 years, and more than 10 years. Question 74 (year in which officers received their commissions) is recoded as: 1987-1989; 1984-1986; 1979-1983; 1969-1978; and 1968 and earlier. Six age categories were created

(Question 93); these are: 17-21 years of age; 22-25 years; 26-34 years; 35-44 years; 45-54 years; and 55 or more years of age.

**Imputed and Constructed Variables.** A few responses to questionnaire variables were imputed due to missing data. Questionnaire items which are used as crossing variables in the Tabulation Volumes, but which had missing values were imputed using the SIDPERS data tape. Variables included here are: Pay grade (Question 73); Prior service (Question 5); MOS/AOC-qualified (Question 28); Marital status (Question 97); Gender (Question 92); and Education (Question 95). The values on these variables in the SIDPERS data tape are used in place of the missing variable values in the questionnaire data.

The weighted percents of the frequency of responses falling in each of the response categories for each crossing variable category are reported in the Tabulation Volumes. For example, the weighted percent (total equals 100%) of responses across Questionnaire Item No. 1 is divided among the possible reasons for Joining the Reserve for Junior Enlisted (E1-E4), and then for Junior NCOs (E5-E6), etc. In addition to these weighted percents, five other response categories are included in the left hand column of the tables. These categories report anomalies in the respondents' answers to questionnaire items. These categories are:

- **"Illogical"** -- Respondent gave responses to two or more items that, when correlated, showed ambiguity in logic, e.g., a Colonel who said he(she) was a squad leader.
- **"Missing"** -- Respondent did not provide an answer to an item that required a response.
- **"Mult Resp"** -- Respondent marked multiple responses to an item that required only one response.
- **"N/A"** -- Respondent answered an item that was not applicable or appropriate to himself/herself, e.g., attitude of spouse toward Reserve participation for single respondents.
- **"Valid Skip"** -- Respondent did not provide answers to a series of questions because the respondent was not part of the appropriate respondent pool, e.g., enlisted personnel were asked to skip questions pertaining to officer training.

**Data Edits.** Briefly described here are the procedures for data editing and the flagging of missing responses, multiple responses and invalid skips. Data entry of survey responses was pre-programmed to place asterisks for multiple responses (i.e., questionnaire items that

required one answer and the respondent gave more than one response), and blanks or zeros for missing responses (i.e., questionnaire items that required respondents to answer).

After the data were entered, computer programs were written to assign values of ".V," "valid skip" to those questionnaire items that lacked responses and were inappropriate for the respondent to answer (e.g., enlisted personnel did not answer questions pertaining to officer military education). On the other hand, questionnaire items that were inappropriate for respondents yet respondents provided answers (e.g., enlisted personnel who answered questions pertaining to officer military education) were coded as ".E" meaning "erroneously answered." Multiple response codes were converted to ".M". Blanks or zeros (i.e., missing responses) were assigned a value of ".".

The last form of data editing was marking respondent answers that appeared illogical. Frequency distributions were performed on responses between questionnaire items, and then examined for inconsistencies in responses. For example, for Questions 7 and 74, it is highly unlikely a Reservist left active duty before 1940 or, for officers, received his/her commission before 1940. Therefore, any response prior to 1940 was treated as ".I". Responses within single questionnaire items were flagged instead of assigning an ".I". For example, a respondent might say that his/her spouse does not have a problem attending Reserve activities, and at the same time, mark another response within that question indicating that his/her spouse has problems attending Reserve activities (Question 24). The procedures for data editing, cleaning and flagging, and the assignment of special codes are described in greater detail in the User's Manual.

#### **Treatment of Weighted Data in the Tabulation Volumes**

The tabulations provide information about the distribution of responses for the cross-sectional and longitudinal samples separately. Tabulations are percentages based on the sample data, weighted to yield population counts. At the bottom of each page in the Tabulation Volume appear the weighted and unweighted Ns for each of the column variables. The unweighted N can be used to judge the relative reliability of the estimates. The larger the number of respondents, the more reliable, in general, are estimates based on the questionnaire responses. Also included are the total N of missing cases for each column variable, both weighted and unweighted. All weighted counts have been rounded to the nearest whole number. Finally, brief notes regarding the procedures used to create the column variables are presented.

**Cautions in Comparing Weighted Percents.** Data from the tables should be used for determining how respondents reacted to questions and for framing questions about issues that may be of further analytical interest. It is not appropriate to use these data to make comparison statements about statistically significant differences between subgroups formed by the crossing variables. Considerable variation exists in survey design effects on the estimates and the standard errors for percents. Information is not presented in the Tabulation Volumes to take these considerations into account. Such information is crucial in determining whether differences are largely due to measurement and sampling error, or represent true differences between subpopulations. For example, some estimates may be very precise with errors of plus or minus 1%, while other estimates on the same page of tabulations may be plus or minus 20%. The number of respondents from which the percentages are derived is only one contributing factor to the size of the error involved in the percent estimate indicated on the tabulation page.

**Estimating Subpopulation Subgroup Size.** Footnotes at the bottom of each page in each of the Tabulation Volumes list the weighted and unweighted counts represented by the respondents in each column of the tabulations. Weighted counts are estimates of the U.S. Army Reserve population in the subgroups presented in the columns. Multiplying the percent from the tabulation for a particular response by the population estimate for the relevant subgroup gives an estimate of how many Reservists that are represented by that response. The multiplier is a percent of the final sample size; therefore, the product of the subpopulation count and the percent must be divided by 100.

**Estimating Row Weighted Percents.** The following describes procedures to derive weighted percents corresponding to two or more subgroups represented by column headings who have similar row response (e.g., the percent of Reservists in two or more rank groups who completed specific educational levels).

The percents in the tabulations are column percentages, not row percentages. For example, in Question 95 in the combined officer and enlisted cross-sectional Tabulation Volume, "What is the highest level of education you have completed?," the column percents represent the percent of Reservists (in a rank group) who completed a particular level of education. It is possible to compare weighted percents between rank groups. For example, the percent of junior enlisted, noncommissioned officers, etc., who have completed high school can be compared. However, it is not possible to directly read in the tabulations the percent of respondents who have

completed high school in each of the rank groups. As explained below, the row percentages necessary for such a comparison can be estimated even if the reader does not have access to the data files for easy calculation.

Let's say that there is interest in knowing the percent of high school graduates who are from specific rank groups (e.g., junior enlisted, NCOs, etc.). To determine how many high school graduates are in each of the rank groups, weighted row Ns and weighted row percents need to be calculated for each rank group who completed high school. To do this, the column percent who graduated from high school is multiplied by the column total weighted N. This is done for each rank group. As percents represent proportions, each product must be divided by 100. The resulting N is the weighted number of Reservists in each rank group who completed high school. The weighted Ns for each rank group then can be divided by the sum of the weighted row Ns of all the rank groups considered in the comparison. In order to derive a percent, the quotient for each rank group needs to be multiplied by 100. The resulting percents represent the percent of Reservists in a particular rank group (e.g., junior enlisted, NCOs, etc.) who completed high school education.

**Estimating Valid Column Weighted Percents.** Of special note is that column percents included responses falling into both valid response categories and missing response categories, that is, illogical responses, multiple responses, valid skips, missing responses, and those respondents for which the question was not applicable. These missing response categories are included as part of column percents for two reasons. First, by including missing responses, the denominators for all percents in the Tabulation Volumes are uniform, thereby avoiding erroneous comparisons. Take the case, for example, that missing responses are excluded from column percents. Further, suppose there is a questionnaire item that had a substantial number of respondents who did not answer the question (i.e., were missing), and the percents for valid responses are compared to valid response percents on the same question for another subpopulation that had very few missing responses. Reporting percent of responses as missing preclude making comparisons that in one case have relatively few respondents and in the other case, many respondents. The second reason for reporting column percents for all possible response categories is that the Not Applicable and Valid Skip categories indicate to which subpopulation the question applied and avoids making broad overgeneralizations. For example, Question 24 asks about life events that preclude spouses from participating in Army Reserve family activities. A large number of respondents are excluded because they were not married and this is reflected in the large percent of respondents falling in the Valid Skip category.

The percents for only valid responses can be generated by multiplying the column percent by the weighted column N (indicated at the bottom of the Tabulation Volume page) and then dividing by 100 (to change the percent to a proportion). The derived Ns for valid responses can then be summed and used as the total N for valid responses. The derived N for each of the valid responses can then be divided by this total N denominator and multiplied by 100 to yield column percents for valid response categories.

In summary, the tabulations can be read for the percents of subgroups that responded in particular ways. These percents, used along with the population counts, can be used to approximate the population size and the relative sizes of the subgroups within the population that responded in specific ways (i.e., derivation of row percents).

## **SURVEY INSTRUMENT**

**1989 Survey of U.S. Army Reserve TPU Soldiers**

## ABOUT THE QUESTIONNAIRE

This questionnaire is designed to obtain the opinions of soldiers about the Army Reserve. The opinions of each soldier in the Army Reserve are important to the planning of your future and the future of our military forces. We will ask you questions about your experiences and the specific duties you perform in the Army Reserve.

## ANSWERING THE QUESTIONNAIRE

It is important that you be frank and honest in answering the questions so that results are accurate and represent the opinions of all soldiers. Westat, Inc., a private survey research firm, has been contracted by the government to conduct this study. Although each questionnaire has an identification number, it is used only to track the return of the questionnaire. After your questionnaire has been processed, your questionnaire will be destroyed. Your answers will be reported along with those of other soldiers. Therefore, no one will know what you have said specifically.

Time to complete this questionnaire during your drill period has already been arranged with your unit commander. Please take time during this month's drill to complete this questionnaire. After completing the questionnaire, place it in the envelope included in your survey packet, seal the envelope, and return it to your unit's designated survey administrator. All completed questionnaires will be returned in their sealed envelopes to Westat, Inc. by the survey administrator.

If you have any questions or comments about this questionnaire, write to us at:

Headquarters, Department of the Army  
Office of the Chief, U.S. Army Reserve (ATTN: DAAR-PE)  
Washington, DC 20301-2415

Follow the directions below on how to indicate your answers.

## INSTRUCTIONS FOR COMPLETING THE QUESTIONNAIRE

-  **USE A NO. 2 PENCIL ONLY**
- Make heavy black marks that fill the circle completely.

In the Army Reserve, there are opportunities to develop the job skills I want.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My duties in the Army Reserve are not challenging enough.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My duty responsibilities in the Army Reserve are clearly defined.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My duty position in the Army Reserve does not use my skills, training, or experience.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
The people in the unit where I work are competent in doing their assigned tasks.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
It is my experience that promotions in the Army Reserve are handled fairly.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
There is cooperation and teamwork in my unit.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
